

HYBRID PROTECTION STARTS WITH LUCAS

FAQS

Q: WHY DO HYBRIDS NEED A SPECIAL OIL ADDITIVE?

A: Hybrid engines start and stop frequently, causing extra wear on engine parts. Lucas Hybrid Additives protect those components and extend engine life.

Q: CAN I USE THIS IN ANY HYBRID VEHICLE?

A: Yes. Lucas Hybrid Additives are compatible with all major hybrid vehicle brands and engine types.

Q: WHAT ABOUT PLUG-IN HYBRIDS (PHEVS)?

A: Absolutely. PHEVs still rely on internal combustion engines, and they also benefit from added wear protection.

Q: WILL THIS VOID MY WARRANTY?

A: No. Lucas Oil Additives meet high-quality standards and are safe for use under normal vehicle operating conditions.

Q: HOW OFTEN SHOULD I USE THE ADDITIVE?

A: Use with every oil change for maximum protection, or as recommended on the product label.

Q: CAN I USE THIS IN A TRADITIONAL GASOLINE ENGINE TOO?

A: Yes! It's designed for hybrids but works great in conventional engines as well—especially those with stop/start systems.
